Languages: Spanish (Native), English (Professional Working Proficiency)

PROFESSIONAL SUMMARY

Software Engineer with 6+ years of experience building distributed systems, AI-powered platforms, and mission-critical fintech services. Specialized in TypeScript/Node.js, Python, event-driven architectures, and AWS/GCP, with hands-on experience in multi-agent orchestration, tool calling, asynchronous processing, secure M2M communication, and high-availability transactional systems.

PROFESSIONAL EXPERIENCE

Fullstack Developer (AI & Core Systems) | Entropy Systems | Barcelona, Spain (Remote)

April 2024 - Present

- **Architected and deployed a distributed asynchronous regulatory document and artifact generation engine** using Fastify and Python orchestrated with BullMQ and Redis, reducing processing times by 65% while handling 2,000+ monthly documents.
- **Co-designed the agentic system architecture and engineered the core AI tooling backend** (multi-agent orchestration, tool calling, and autonomous execution loops), achieving secure M2M communication with <50ms latency via decoupled APIs and token authentication.
- **Engineered a secure event pipeline connecting isolated client VPCs to the central platform**, orchestrating distributed workers to process 10,000+ daily events with guaranteed data consistency and zero public endpoint exposure.
- **Standardized agent-assisted engineering workflows (SDLC)** using autonomous coding agents, reducing microservice refactoring lead times from 4 days to 1.5 days (-62%) while expanding automated test coverage.
- **Operated distributed microservices across AWS and GCP with 99.9% availability**, containerizing workloads in Docker and automating CI/CD pipelines for zero-downtime deployments backed by distributed observability via Sentry and CloudWatch.

Software & Mobile Engineer (Part-time Consultant · Side Project) | Fintech Scale-up (Credit & Financial Platform · NDA)

July 2025 - July 2026

- **Engineered the end-to-end cross-platform mobile architecture** (iOS and Android) using React Native and TypeScript for a credit origination platform during its scaling phase, delivering 20+ modular views (biometric KYC onboarding, analytics dashboard, transactional flows, detailed history, and real-time chat support).
- **Architected and maintained the cloud data infrastructure and backend services**, implementing robust authentication and granular Row-Level Security (RLS) policies to safeguard sensitive credit records and financial contracts.
- **Optimized mobile application performance and network resilience**, reducing cold-start load times by 35% and securing reliable offline persistence for credit applications and transactions in low-connectivity conditions.

Fullstack Developer | Interfell - ePayco | Remote

June 2021 - April 2024

- **Maintained 99.9% availability across mission-critical payment gateway services** processing 500,000+ monthly transactions, developing and maintaining transactional microservices in Node.js (Express) and TypeScript on MySQL.
- **Engineered financial transaction resilience and idempotency** using Circuit Breakers, Rate Limiting, and AWS SQS queues with Dead Letter Queues (DLQ), guaranteeing zero duplicate charges during banking gateway outages.
- **Reduced p95 transaction latency by 28%** by optimizing complex MySQL queries, offloading asynchronous background notifications via AWS SQS, and refactoring critical payment endpoints.
- **Led payment gateway integrations for merchants and partners** across React web apps, REST, GraphQL, and legacy SOAP services, enforcing automated testing suites with Jest and continuous monitoring in Datadog and Sentry.

Systems Analyst / Software Developer | Intelix Synergy, C.A. | Valencia, Venezuela

March 2020 - June 2021

- **Designed and developed 3 modular internal management applications** in JavaScript, Node.js, and Python for commercial operations, used daily in production.
- **Ensured continuous high availability (zero unplanned downtime)** administering production Linux servers configured with NGINX reverse proxies, load balancing, and SSL/TLS policies.
- **Reduced developer onboarding lead time by ~40%** by standardizing 15+ API contracts and system blueprints using OpenAPI/Swagger specifications.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python
- **Backend & Architecture:** Node.js, Fastify, Express, FastAPI, Microservices, Distributed Systems, Event-Driven Architecture (EDA), REST / GraphQL APIs, Idempotency & Resilience
- **Applied AI & Agentic Systems:** Agentic Systems, Multi-Agent Orchestration, Tool Calling & Function Calling, OpenAI & Anthropic APIs, RAG Pipelines, Agent-Assisted SDLC, M2M Communication
- **Cloud & Infrastructure:** AWS (ECS, Lambda, SQS, S3, RDS), GCP (Cloud Run), Docker, Docker Compose, CI/CD (GitHub Actions), Linux, NGINX, VPC Isolation
- **Databases & Messaging:** PostgreSQL, MySQL, MongoDB, Redis, BullMQ, AWS SQS, Row-Level Security (RLS), Prisma ORM
- **Frontend & Mobile:** React, Next.js, React Native (iOS/Android), Vite, Tailwind CSS
- **Observability & Quality:** Datadog, Sentry, CloudWatch, Vitest, Jest, TDD, Git / GitHub, Zod

EDUCATION

Bachelor of Science in Computer Engineering

Universidad José Antonio Páez | Valencia, Venezuela — Conferred 2020

Accredited university degree specializing in distributed systems, computer architecture, relational databases, and advanced algorithms.

ADDITIONAL INFORMATION

- **Areas of Specialization:** Distributed Systems Architecture, Agentic AI Systems, Multi-Cloud (AWS · GCP), Payment Gateways & Resilient Infrastructure.
- **Portfolio & Code:** enmanuel-leon.com | github.com/enmanuel-leon
